

### APPLICABLE FOR:

- ✓ Civil Defence Shelters

### Temet's dry toilet cabin KH-3:

The dry toilet cabin KH-3 is used in civil defence shelters. The unit is situated beside the shelter's pressure relief valves which serve as the ventilation system for the lavatory facilities. The dry toilet units are placed in the dry toilet cabin.

Each dry toilet cabin unit is equipped with a zip-fastened entrance. The dry toilet cabin unit frame consists of a tubular steel structure covered with a fire-resistant fabric, the fire rating of which has been approved in accordance with IMO Resolution A.471 (XII) and SIS 65 00 82 test methods..

The dry toilet cabin meets the requirements of the regulations issued by the Finnish Ministry of the Interior.

### Highlights and Characteristics:

- Standard sizes: 2- and 3-Units
- Steel structure, covered with a fire-resistant fabric
- Installed in thousands of applications and approved by various organizations
- One dry toilet per each 20 m<sup>2</sup> of protective space (i.e. one per each 26 shelter places or part thereof).
