Temet's shelter bunk bed VV-3:

The shelter bunk bed is used in civil defense shelters. Its purpose is to ensure sleeping places for the occupants of the civil defense shelter during the use of the shelter for protection. The civil defense shelter bed can also be used as a stretcher.

The civil defense shelter bed is composed of three beds on top of each other. During normal conditions, the civil defense shelter bed can be dismantled and packaged for storage.

The seams of the bed's covering are hot-welded seams or stitches. The covering is water-resistant and mould-proof, and functions simultaneously as a mattress. The frame of the bed is built from hot galvanized steel profiles.

Highlights and Characteristics:

- The shelter bunk bed fulfils the requirements set by the Finnish Ministry.
- The frame of the bed is built from hot galvanized steel profiles.
- Can also be used as a stretcher.
- The material of the covering of the bed was tested using the IMO Resolution A.471 (XII) testing method and is not flammable
